ORIE 4999 Supervised by Professor Williamson

What I did

I converted everything to the weighted version. I just noticed this, but none of the tests triggers the case in Trevisan where you don't do the greedy algorithm first, because in each test, the greedy and Trevisan algorithms return the same number.

What I will do Next

I'm interested in taking on another independent study with Prof. Williamson next semester (if this one is deemed complete and satisfactory; otherwise, I will continue working on this one)!
